Schreiner Group is an internationally active German family company in the printing and film-processing industry. The company offers customized products, solutions, and services for the pharmaceutical industry and medical technology, the automotive and electronics industry, logistics and mechanical engineering.

A close-up photograph of a printed circuit board (PCB) or flexible electronic system. The image shows various components including copper traces, solder joints, and different colored substrates (white, grey, and brown). The board is mounted on a larger, textured brown surface.

Competence Center Schreiner PrinTronics

Schreiner PrinTronics, a competence center of Schreiner Group, develops and realizes customized electronics in film. From the initial idea to production, the specialist designs and manufactures innovative high-tech film systems with integrated electronic functions - from printed conductor paths all the way to multi-functional control surfaces and sensors. Beside individual bonding solutions, current developments cover the integration of flexible batteries, LEDs, chips, PCBs and RFID functionality.

We are active in the field of

- » Deposition and processing techniques of conductive and functional layers
- » Antennas, switches touch panels
- » Smart RFID label and sensor products
- » Hybrid systems
- » Print production and bonding

We offer Programs for Students

From the lecture hall to the high-tech industry: Would you like to expand your knowledge through practical experience in the context of challenging projects? We offer interesting prospects to committed students. At Schreiner Group, you will take on exciting tasks and become more closely acquainted with a dynamic industry.

We support

- » Internships
- » Student trainee positions
- » Theses / Bachelor / Master
