InnovationLab (iL) is the joint platform for research and knowledge transfer in the field of printed electronics at the interface of academia and industry in the Rhine-Neckar metropolitan region.

The interdisciplinary field of organic and printed electronics requires deep knowledge across multiple domains.

A solid understanding of materials, processes and printing technologies is essential for the development of flexible and hybrid electronic systems. We offer state-of-the-art infrastructure along with extensive expertise in order to develop novel products.

Our offerings are extended by the knowhow of our excellent partner network consisting of companies and research institutes such as BASF SE, Karlsruhe Institute of Technology, and Heidelberg University.

Research & Development

InnovationLab GmbH manages the research and development platform and brings together shareholders and partners for cooperative research in joint facilities.

We are active in the field of:

- OFET
- LEC
- Smart textiles
- Material development
- Deposition and processing techniques
- Machine development
- Measurement techniques
- Packaging
- Hybrid systems
- Electronics
- Substrates
- Vacuum techniques
- Print production

We offer

We mainly focus on transforming inventions into marketable products, and training the next generation as well as the coordination of the platform partners' joint activities.

iL is supported by the University of Heidelberg, the Karlsruhe Institute of Technology (KIT) and by the companies BASF SE, Heidelberger Druckmaschinen AG, and SAP SE.

We support

- Internships
- Bachelor/Master Theses
- Trainee programs
